What to know about this kit . . .

Little kids naturally love counting, sorting, doing puzzles, and discovering patterns. But once these activities get labeled "math," with daily doses of addition, multiplication, fractions, and long division, many children lose both confidence and interest.

Playing with numbers makes math intuitive and fun. With Osmo Numbers, kids add, subtract, and multiply by zooming tiles in and out of the Osmo play space. As they master new skills, players collect zany fish, unleash special effects, and advance to higher levels. Playing with Osmo Numbers can build skills and confidence in counting, addition and subtraction, and multiplication.

Osmo Pizza Co is a fun restaurant simulation game that packs in lots of real-world math skills, including addition and subtraction, fractions, fast-paced mental math, alongside basic business concepts. Kids make the pizzas, collect payment, and count out the change. Successful players can even invest their profits into upgrading their business.

The book *How Many Guinea Pigs Can Fit on a Plane: Answers to Your Most Clever Math Questions*, by Laura Overdeck is full of questions asked by fans of the author's Bedtime Math series. Each answer walks you through the math so that you can learn to solve clever questions of your own.

The book *Fraction Fun* by David A. Adler features "pizza math," so it ties in
