This kit is recommended for Grades 3 and up

Activity Kit

Build a Car: Forces, Energy, and Motion Kit

What to Know About This Kit...

This kit contains a variety of building parts for constructing 10 different “cars” powered by rubber bands, wind, springs, and batteries. An instruction manual guides you step by step. Of course, you can use your imagination to construct other things as well.

In addition to the building set, there is an 86-page Teacher’s Guide with experiments and background information.

You should note that this kit contains many small parts and is not appropriate for young children.

This kit is recommended for Grades 3 and up
